- Photos Storyboard
- Project 3:

# Photos Storyboard

1

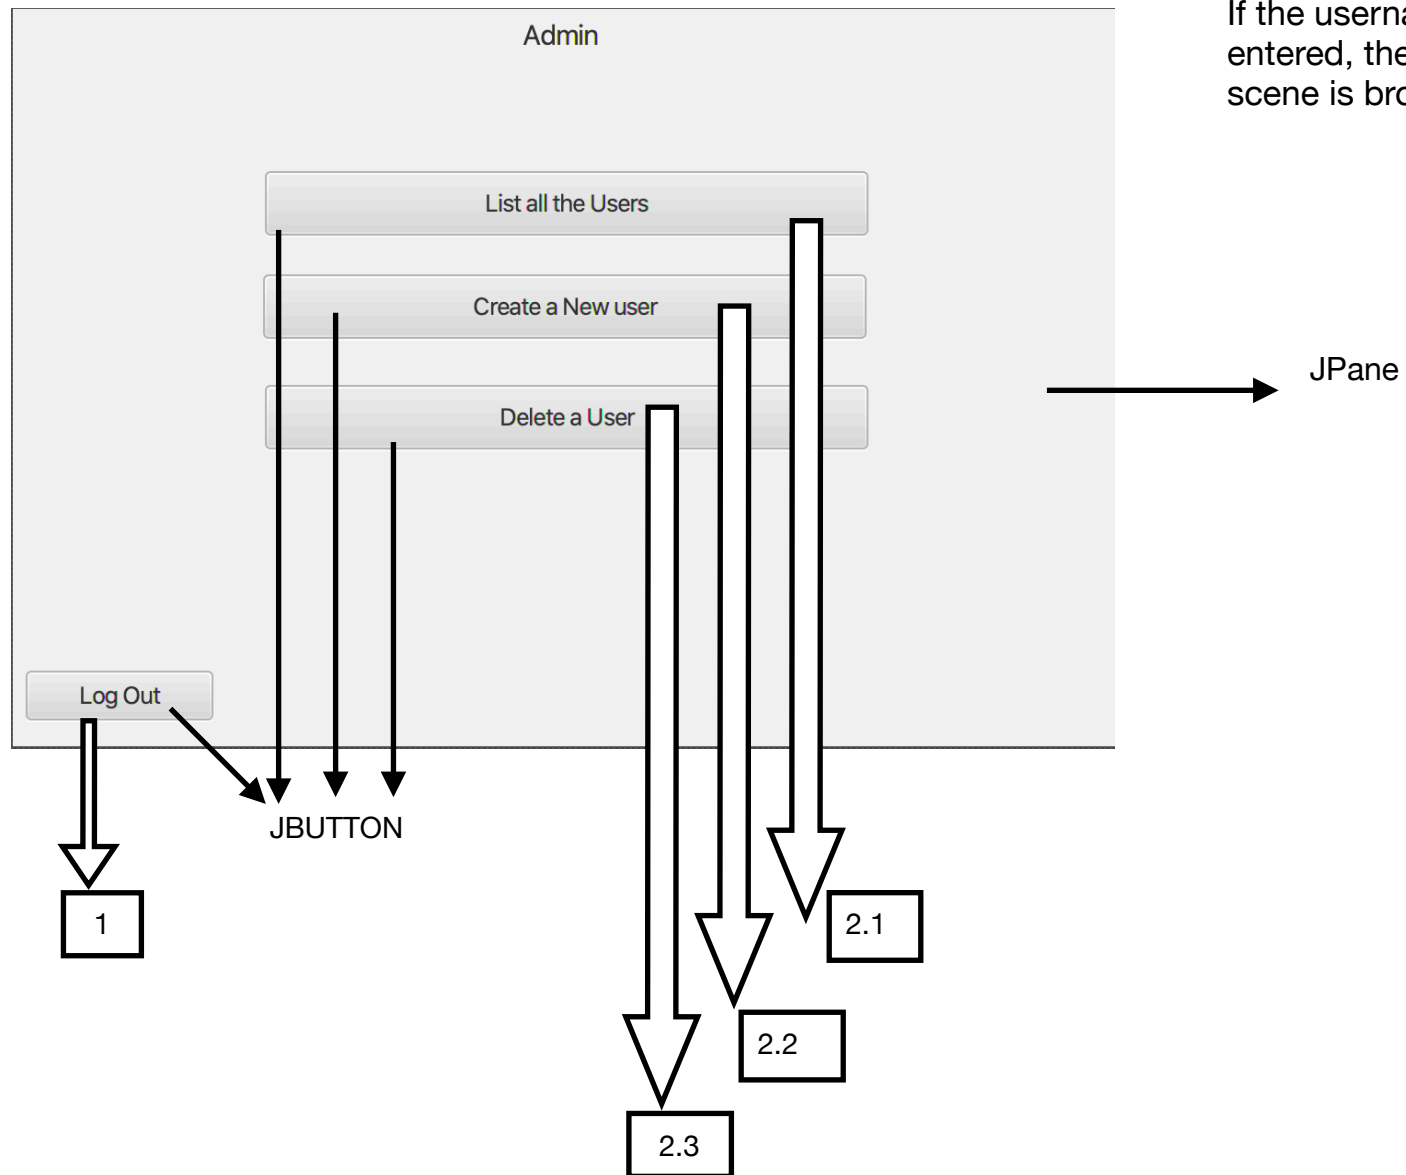

Once the Photos application is invoked, the photos UI is initialized to the login page with:

1. JTextField which takes username: admin, stock, or any user that might exists
2. If the user entered exist, the scene is changed to the specific user

# Photos Storyboard 2.0

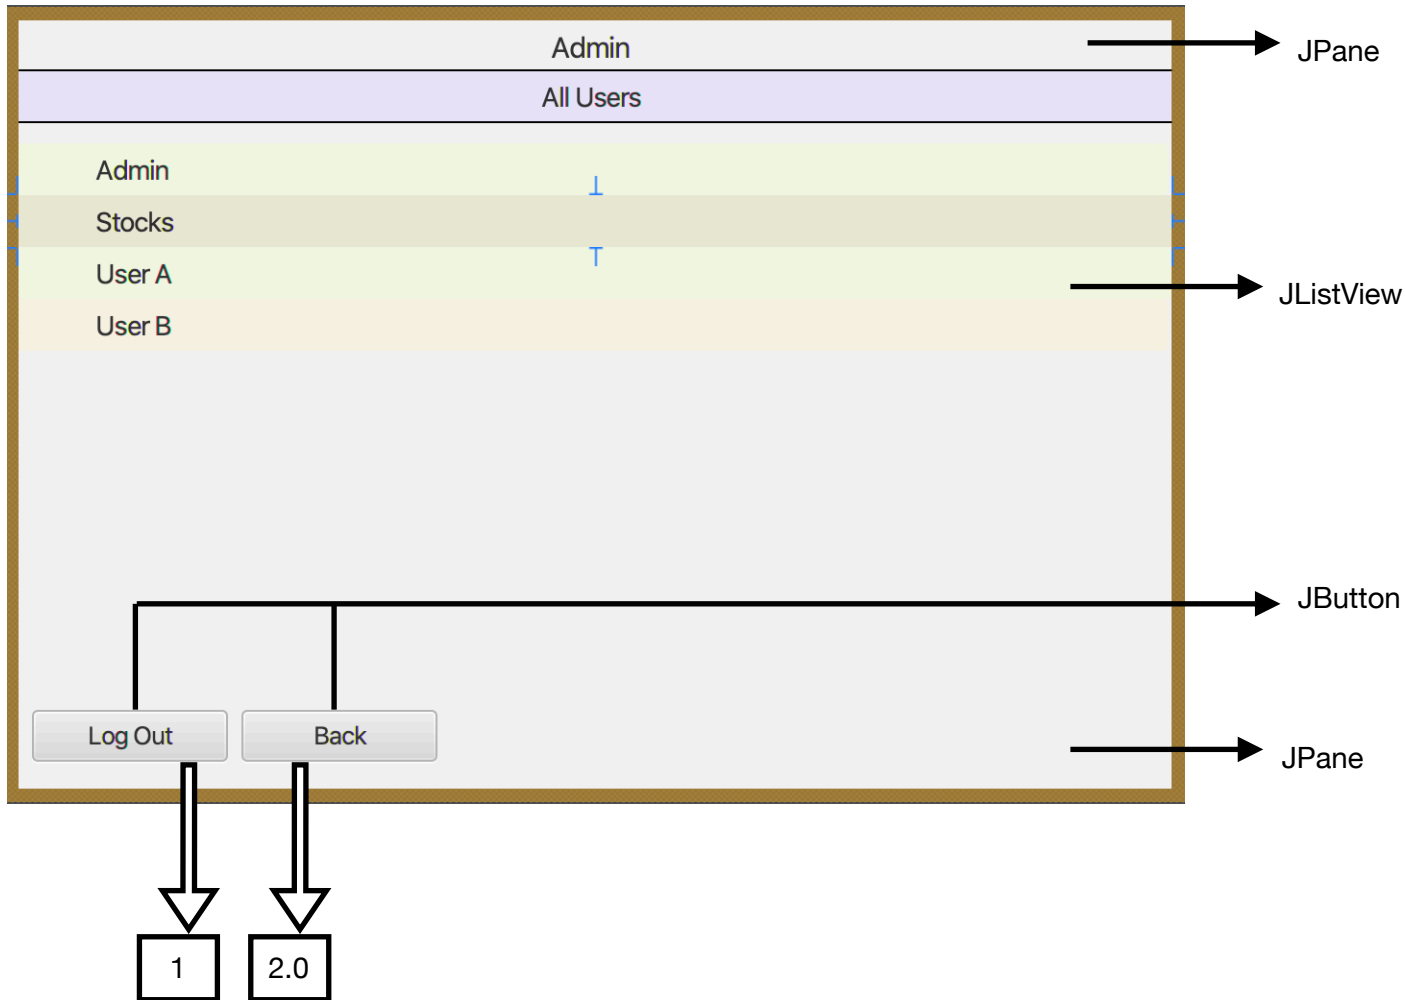

## Admin:Home Page

If the username admin is entered, the admin home page scene is brought up.

# Photos Storyboard 2.1

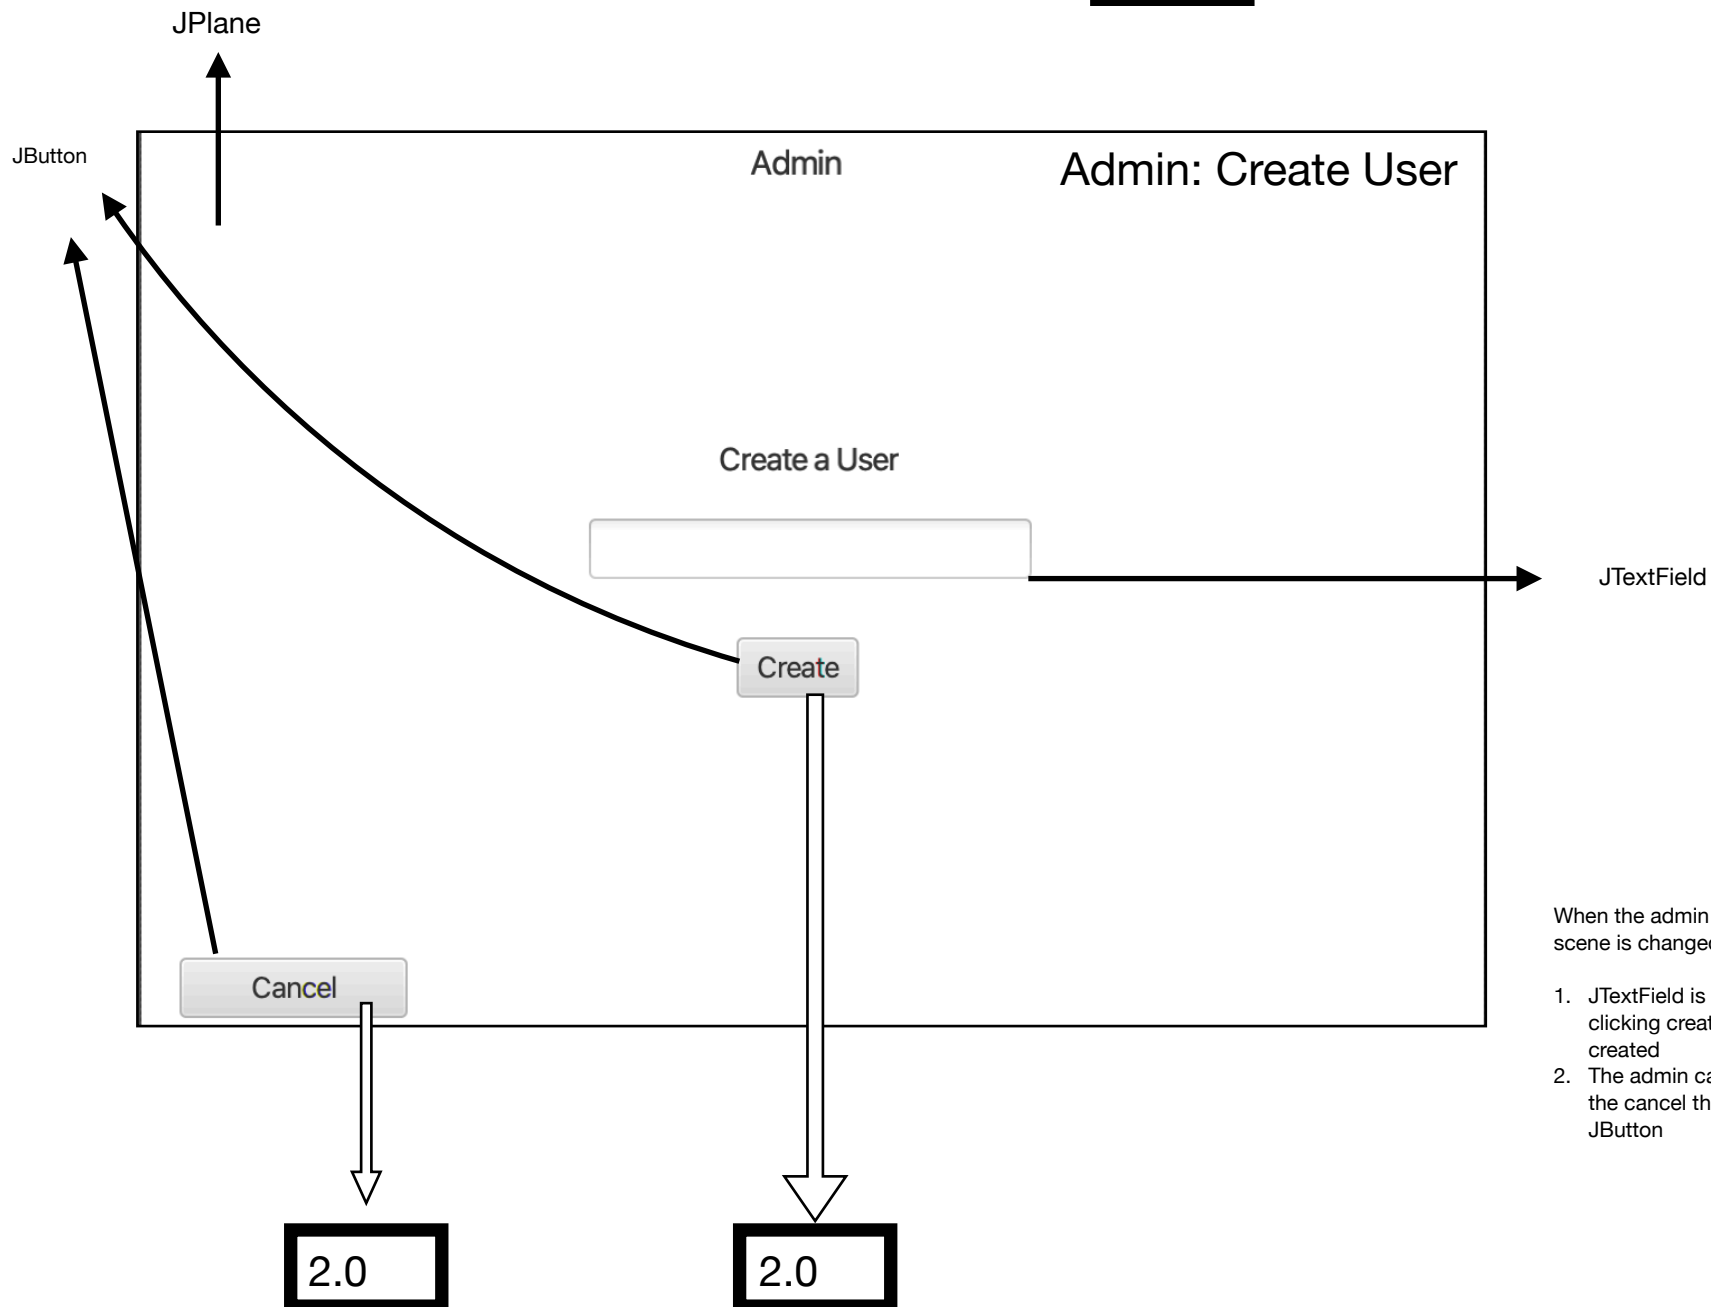

## Admin: User List

When list all users button is clicked, this scene is initialized with:

1. JListView is initialized with the list of users
2. Logout will switch to login scene
3. Back will switch to Admin home page

# Photos Storyboard 2.2

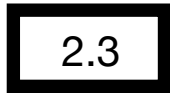

When the admin clicks on create new user, the scene is changed to the create user scene.

1. JTextField is ready to take input and upon clicking create Button, a new user is created
2. The admin can cancel this action by clicking the cancel this action by pressing cancel JButton

## 2.3

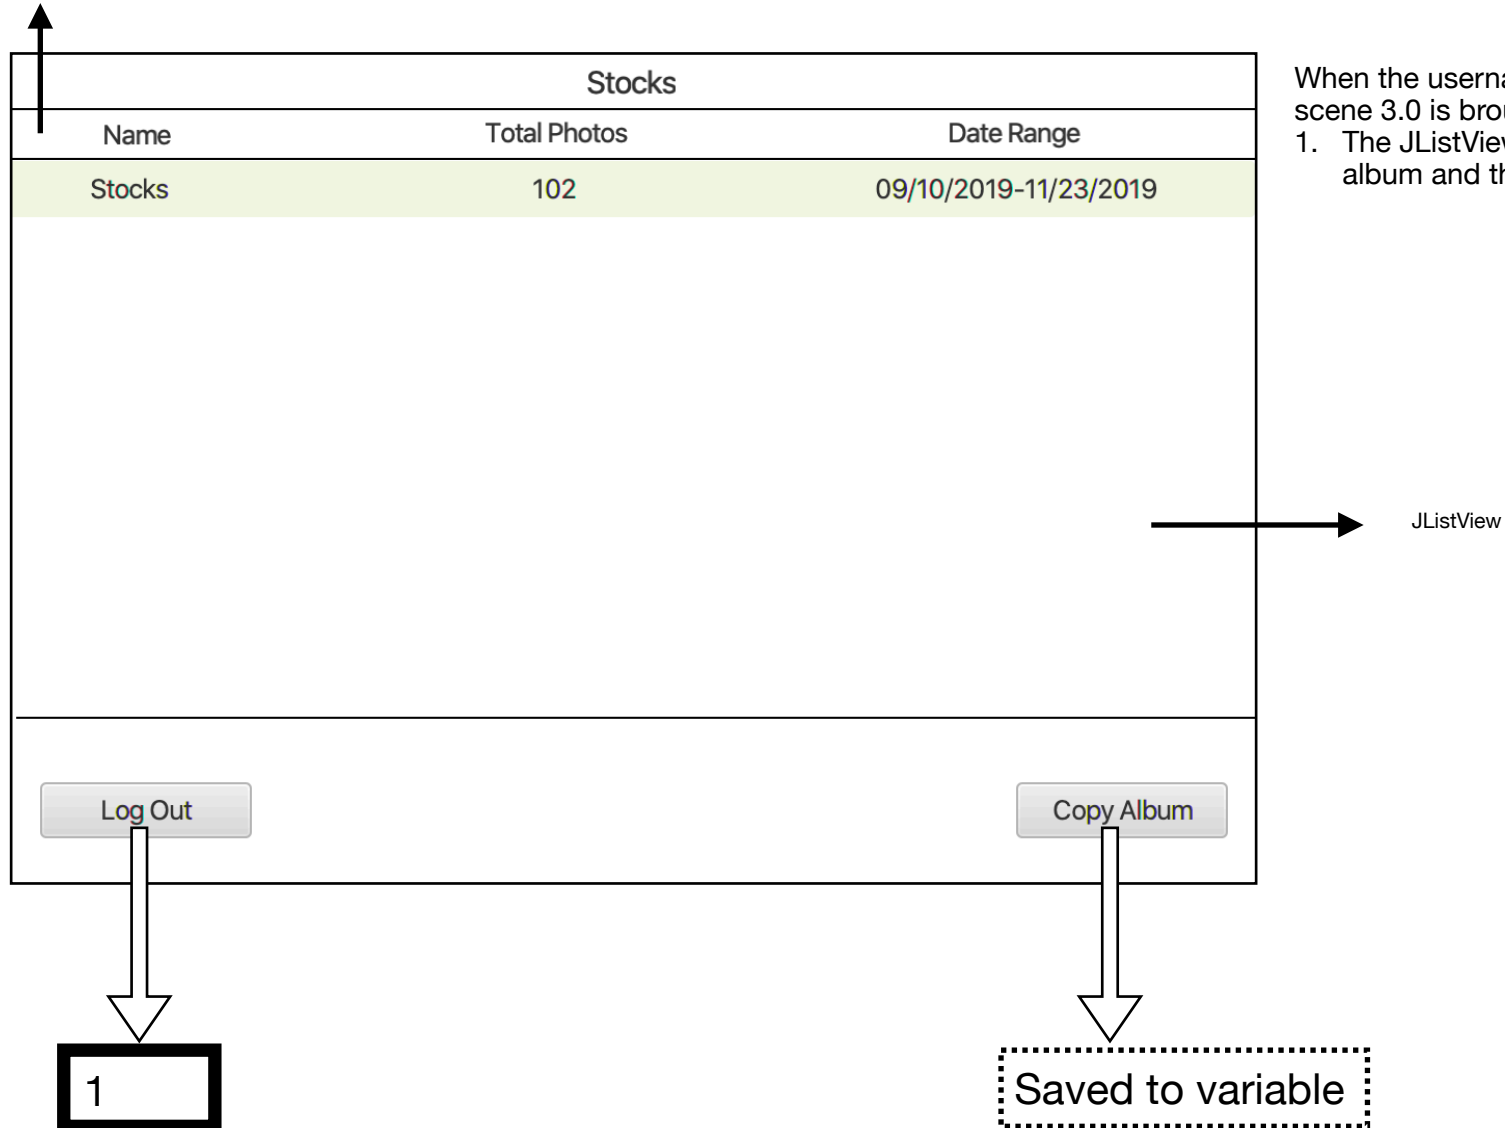

## 2.3

- ## 2.3

# Photos Storyboard 3.0

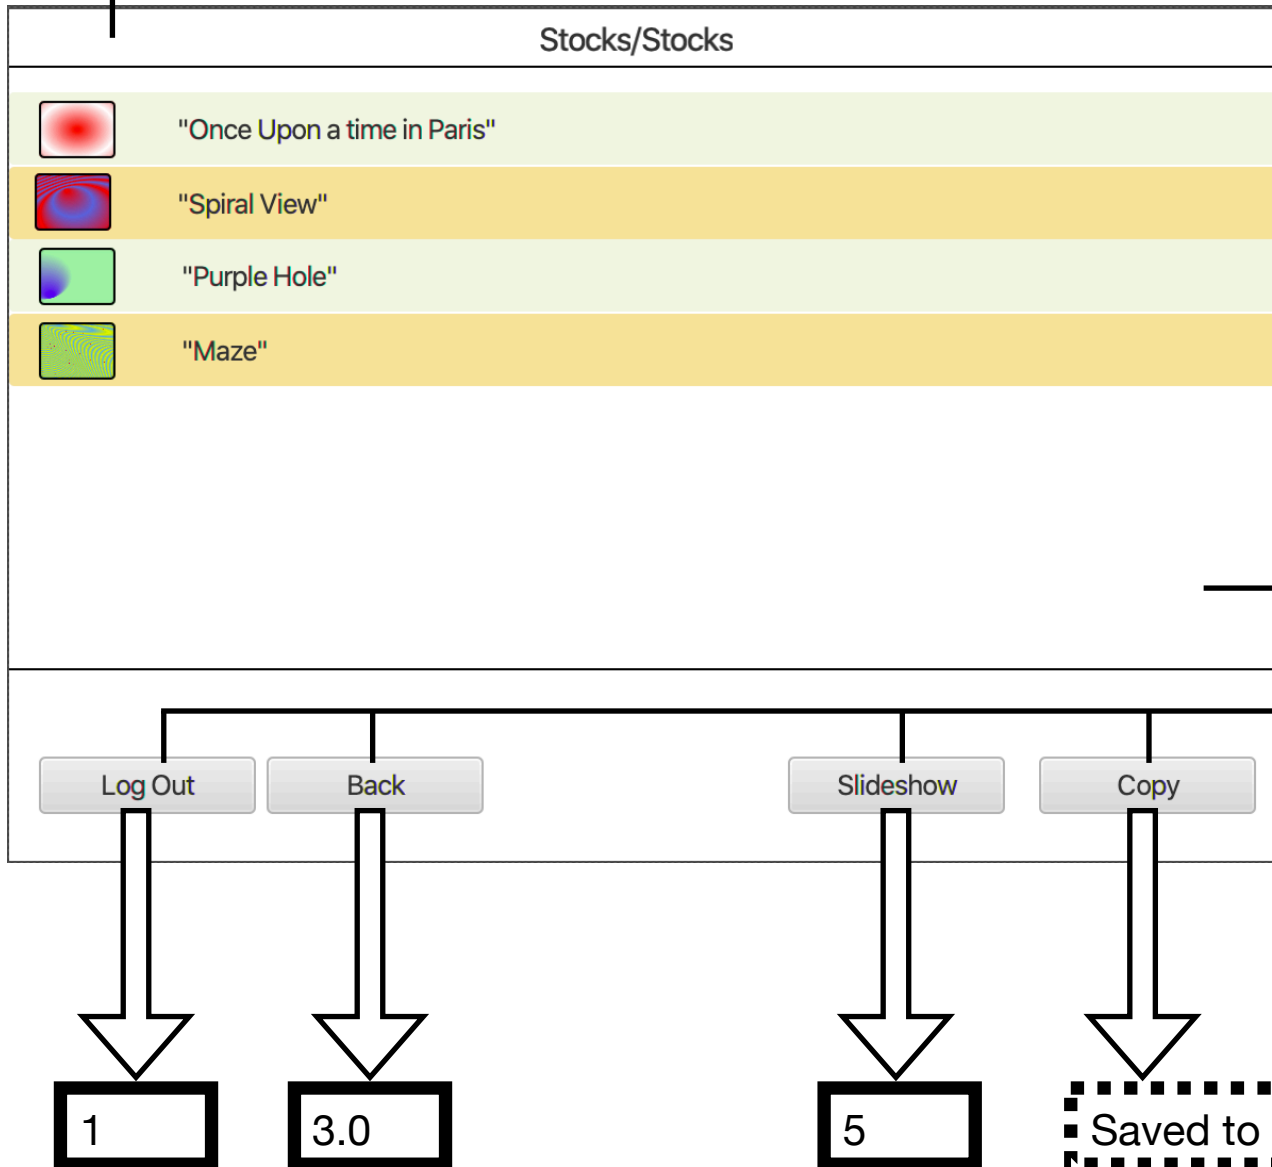

JPane

When the username stock is entered in scene 1, scene 3.0 is brought up with:  
1. The JListView is initialized with the stock album and the details

JPane

# Photos Storyboard 3.1
