Project - 3 (Photo Album) - Work Split Document

Window	Name: Description
Log in Window	**Suraj**: Designing the window and work on the correctness of the username. Also work on forwarding the user info to the next session.
Admin: Home Page	**Manohar:** Designing the window and work on user section of choice and forwarding the session info to the next session.
Admin: User List	**Manohar:** Designing the window and keeping track and listing all the users .
Admin: Create User Window	**Suraj:** Designing the window with controller and adding if the user if it does not already exist.
Admin: Delete User Window	**Suraj:** Design the window similar to the create user and check for the validity of the user inorder to delete it from the user's list.
Stocks: Home Page(Stocks Album Window)	**Manohar:** Design the photos home page with limited functionality of letting to only open the album, copy the default album and logout.
Stocks: Photo List Window	**Suraj:** Design the list view of the photos with the limited functionality of going back to the stocks album page, starting a slideshow or copying a photo.
User: Home Page(User Album Window)	**Manohar:** Will design the home page just like the stock's home page but with full functionality.
User: Photo List Window	**Suraj:** Will design the photo list view just like the stock's photo list view with the full functionality.
Photo Display Window	**Manohar:** Will design the display layout after fetching all the details of the picture to display. (The photo will not be editable from this window)

Edit Photo Window	**Suraj:** Will design the window and provide the functionality of editing/adding the caption, and adding/deleting the tag from a single photo. Will be responsible to check the input before sending it for the back-hand validation. (Limiting the tag by a fixed number and checking tag-value pair existance.)
Add Photo Window	**Manohar:** Will design the add photo window and will take in the path of the photo to add photo. Will be responsible to check the validation of the path.
Create Album Window	**Suraj:** It will be designed similar to add photo but in this it will take in the path of a folder and will call add photo in the background for all the available photos in that folder.
Rename User Window	**Suraj:** Just the user name will be updated after validating that it does not collides with any other existing username.
